## DUCT/AIR CONVEYANCE SYSTEM CLEANING

Whether you are looking to improve your facility's indoor air quality, save money on energy, or provide a cleaner, healthier work environment for your employees, commercial duct cleaning can make a difference.

In all types of commercial buildings, contaminants like dust, bacteria and mold accumulate in a building's HVAC system and ductwork over time. Dirty air ducts and coils are easy to neglect but can create costly issues for property managers, facility managers and building occupants. Constantly circulating dust, mold and pollen can lead to reduced employee productivity, illness, tenant dissatisfaction, and even turn customers and clients away from your business.

True excellence in Commercial and Industrial system cleaning requires an integrated knowledge of the source removal HEPA cleaning equipment, pneumatic and mechanical cleaning systems plus a working knowledge of HVAC systems.
